

COVER is a recliner designed for those who seek maximum comfort with effortless usability. Available with different mechanisms—manual, electric with a single motor, or electric with a dual-motor system—it offers excellent adaptability to meet diverse resting needs.

Its most advanced version features a front-lift function, making it easier for the user to stand up.

A versatile and functional piece, it is ideal for consultation rooms, rest areas, or relaxation spaces in healthcare facilities, where comfort is essential even during extended use.

TECHNICAL DATA SHEET

COVER

Design: Seniorcare Estudio

RECOMMENDED USE

Suitable for consultation rooms, waiting and rest areas, relaxation spaces, and bedrooms.

SEATS AND BACKRESTS

The internal frame of the armchair is made of solid wood, with MDF sides. The seat and backrest suspension system is based on high-durability NEA elastic webbing. The high rubber content in the NEA webbing provides great strength and excellent performance.

The entire unit is covered with high-density flexible polyurethane foam: 30 kg/m³ for the seats and 28 kg/m³ for the backrests, with HR resilience. The seat and footrest upholstery is continuous to avoid gaps that could cause injury.

ARMRESTS

The armrests feature an internal structure made of solid wood and chipboard sides. They are covered with high-density flexible polyurethane foam (28 kg/m³) with HR resilience.

MECHANISMS

Manual recline mechanism: allows the user to manually adjust the coordinated inclination of the backrest and footrest. Release is activated by a side lever.

Motorized recline mechanism: allows the user to adjust the coordinated inclination of the backrest and footrest using a remote control. Powered by electricity.

By holding down the button, the recline motion continues to the final relaxation position or can be stopped at any intermediate point.

Once closed, the chair returns to the seated position.

Motorized recline + lift mechanism: allows the user to adjust the coordinated inclination of the backrest and footrest using a remote control. Powered by mains electricity.

By holding down the button, the recline motion continues to the final relaxation position or can be stopped at any intermediate point.

Once closed, the same button can be used to continue the movement until the user is assisted to a standing position.

Dual-motor recline + lift mechanism: allows the user to adjust the desired inclination using a remote control. The two motors enable independent adjustment of the backrest and footrest. Powered by electricity.

By holding down the button, the recline motion continues to the final relaxation position or can be stopped at any intermediate point.

Once closed, the same button can be used to continue the movement until the user is assisted to a standing position.

WALL-HUGGER MECHANISM: all versions can be fully reclined with a minimum clearance of 5 cm from the wall.

ECOLOGY

ISO 14001 Certified.

The production processes of SENIORCARE INTERIORS are certified according to the ISO 14001 environmental standards to minimize any impact on the environment.

Seniorcare Interiors holds the Registration Certificate in the Carbon Footprint, Compensation, and CO₂ Projects Registry of the Ministry for the Ecological Transition and the Demographic Challenge. Carbon footprint code: 2024-a3268

CERTIFICATES AND STANDARDS

ISO 9001 Certified

SENIORCARE INTERIORS has its quality management certified in accordance with the ISO 9001 standard across all processes of design, manufacturing, and marketing of its products.

WARRANTY

5 years

FINISHES

Upholstery: All fabrics listed in our finishes book.

All our fabrics—except Apollo—are vinyl-based and feature antibacterial, antimicrobial, and antifungal properties.

They offer high abrasion resistance, reaching up to 300,000 Martindale cycles in some cases.
