

TECHNICAL DATA SHEET

MEGAN

Design: Seniorcare Estudio

MEGAN is a recliner featuring classic, elegant and timeless lines. It is available in both fixed and reclining versions, with a continuous upholstered design across the seat and footrest. Designed for intensive use, it features a reinforced solid wood internal frame upholstered with high density polyurethane foam. An ideal piece for lounge areas, halls or bedrooms, it is available in any of the fabrics from our sample collection. Its elegant wingback design enhances comfort and ergonomic support.

RECOMMENDED USE

Suitable for rest areas and bedrooms.

SEATS AND BACKRESTS

The internal structure of the armchair is made of solid wood, with MDF side panels. The seat and backrest suspension system is based on high-durability NEA elastic webbing. The high rubber content of the NEA webbing provides excellent resistance and outstanding performance.

The unit is upholstered with high-density flexible polyurethane foam: 30 kg/m³ in the seat and 28 kg/m³ in the backrest, with HR resilience. Continuous upholstery on the seat and footrest prevents gaps that could cause injury.

ARMRESTS

The armrests feature an internal solid wood structure with chipboard side panels. They are upholstered with high-density flexible polyurethane foam (28 kg/m³) with HR resilience.

LEGS

Made of solid wood, varnished in natural, walnut or oak finishes.

MECHANISM

Manual recliner mechanism which allows the user to manually adjust the coordinated inclination of the backrest and footrest.

TRANSPORT

The TRANSPORT version includes a transport handle and 75 mm diameter Agila wheels from Tente, of the highest quality, two of which are equipped with brakes, allowing the chair to be locked when not in motion.

The MEGAN's castors comply with the UNE-EN 12530:1999 standard.

Castors and wheels – Castors and wheels for manually operated equipment used in collective facilities.
