

A complete collection of recliners available in both fixed and motion versions. Featuring an elegant design with attention to every detail, these pieces stand out for their attractive appearance. Their ergonomic design ensures maximum comfort, making them suitable for prolonged use. Multiple armrest options allow them to blend seamlessly into any décor: wooden arms, upholstered arms, or upholstered arms with wooden tops. In the motion versions, a wide range of mechanism options is available, with a continuous upholstery covering the seat and footrest.

RECOMMENDED USE

Waiting and rest areas.

SEATS AND BACKRESTS

The internal structure of the armchair is made of solid wood, with MDF sides. The seat and backrest suspension system is based on high-durability NEA elastic webbing. The high rubber content of the NEA webbing ensures great strength and excellent performance.

The entire structure is covered with high-density flexible polyurethane foam: 30 kg/m³ on the seats and 28 kg/m³ on the backrests, with HR (High Resilience) properties. The seat and footrest feature continuous upholstery to avoid gaps that could cause injuries.

ARMRESTS

When upholstered, the armrests feature an internal structure made of solid wood with chipboard sides. They are covered with high-density flexible polyurethane foam (28 kg/m³) with HR (High Resilience) properties. Optionally, they can include decorative beech wood trims, varnished in any of the colours from our sample range.

There is also the option of incorporating lift-up upholstered armrests to facilitate lateral transfers for the user.

In the wooden version, the armrests are made of premium-quality solid beech wood and are available in natural, oak and walnut finishes.

LEGS

Made of solid wood, available in natural, oak and walnut finishes.

MECHANISMS

Manual recline mechanism allows the user to manually adjust the coordinated inclination of the backrest and footrest.

Manual recline mechanism - GRAVITY ZERO position: allows the user to manually adjust the coordinated inclination of the backrest and footrest.

It includes the option to adopt the GRAVITY ZERO position, in which the legs are at the same level as or higher than the heart to promote blood circulation. This relaxation position helps relieve pressure on the lumbar and cervical muscles.

Motorized recline mechanism allows the user to adjust the desired inclination using a remote control. Powered by an electrical supply. By holding the button, the user can complete the full motion to the final reclined position or stop at any intermediate point. Once closed, the chair returns to the sitting position.

Motorized recline + lift mechanism allows the user to adjust the desired inclination using a remote control. Powered by an electrical supply.

By holding the button, the user can complete the full motion to the final reclined position or stop at any intermediate point. Once closed, the user can continue pressing the same button to complete the movement to the standing position.

*In the motorized versions, the optional GRAVITY ZERO position can also be included. In this position, the legs are at the same level or higher as the heart to promote blood circulation. This is a relaxation position that helps relieve pressure on the lumbar and cervical muscles.

TRANSPORT

The TRANSPORT version includes a transport handle and 75 mm diameter Agila wheels from Tente, of the highest quality, two of which are equipped with brakes, allowing the chair to be locked when not in motion.

The Nepal castors comply with the **UNE-EN 12530:1999 standard** –

Castors and wheels. Castors and wheels for manually propelled equipment used in public institutions.

TESTS PERFORMED. COMPLIANCE WITH THE STANDARD.

Tests Performed at: **AIDIMME - Technological Institute of Metalworking, Furniture, Wood, Packaging and Related Industries**

The tests carried out on the model are those indicated and applicable according to the following standards:

- **UNE-EN 16139:2013 vc2015, Furniture - Strength, durability and safety - Requirements for non-domestic seating for general use under Level 1 public use conditions.**

The test procedures are described in the following standards:

- **UNE-EN 1728:2013, Furniture - Seating - Test methods for the determination of strength and durability,**
- **UNE-EN 1022:2019, Furniture - Seating - Determination of stability.**

The tests were carried out following the procedures described in the above standards, and the result was **COMPLIANT**.

In the TRANSIT version, the wheels comply with standard **UNE-EN 12530:1999**. During product development, internal validation tests were carried out on the reclining mechanism.

ECOLOGY

ISO 14001 Certified.

The production processes of SENIORCARE INTERIORS are certified according to the ISO 14001 environmental standards to minimize any impact on the environment.

Seniorcare Interiors holds the Registration Certificate in the Carbon Footprint, Compensation, and CO₂ Projects Registry of the Ministry for the Ecological Transition and the Demographic Challenge. Carbon footprint code: 2024-a3268

CERTIFICATES AND STANDARDS

ISO 9001 Certified

SENIORCARE INTERIORS has its quality management certified in accordance with the ISO 9001 standard across all processes of design, manufacturing, and marketing of its products.

WARRANTY

5 years

FINISHES

Wood: Natural, Walnut, Oak.

Upholstery: all fabrics listed in our finishes book.

All our fabrics—except Apollo—are vinyl-based and feature antibacterial, antimicrobial, and antifungal properties.

They offer high abrasion resistance, reaching up to 300,000 Martindale cycles in some cases.
